

VISTA LAGO

WEST PALM BEACH, FLORIDA

This upscale planned development needed large scale amenities to create a stately atmosphere. Armed with aesthetic passion and 3D design software, UDS was able to quickly create realistic renderings of proposed entry designs. By creating the entry features in 3d, we allow our clients to see designs before they spend a dime on construction. By implementing this crucial process early on, things such as detailing and coloring can be addressed early on, and more importantly the visual impact within a space.

By assessing the visual impact of a design in 3d, you are afforded the opportunity to do value engineering. Value engineering is the art of cost reduction without sacrificing functionality - or in this case, aesthetics. By paying close attention to high impact areas of a design on a site, UDS was able to help our client get the most bang for their buck.

Client: Toll Brothers, Inc.

Site Area: Approx. 44.42 AC
