

## BUILDING 3900

GREEN ACRES, FLORIDA

In an effort to revitalize their property and increase value, Tamir-Silvers contracted UDS to create a 3D model of their proposed building renovations. Working closely with the architect, UDS created an accurate representation of the building with the proposed modifications in 3D. This model was then used to do color studies for selecting the color motif; from concept color rendition down to the final exact color. A final rendering with the newly proposed landscaping was then created for use as a marketing graphic and as an aid in receiving project approval.
