

WATER TREATMENT PLANT

Seacoast Utility Authority (Seacoast) was faced with the challenges of upgrading their water treatment plant operations to accommodate the steadily growing housing market in the City of Palm Beach Gardens, FL. Urban Design Kilday Studios was commissioned by Seacoast to assist with the planning and design aspects of the plant upgrade and to represent them before the City of Palm Beach Gardens and the neighboring communities. Benefiting from a longstanding relationship with Seacoast, UDKS collaborated with Seacoast's consultants to prepare a site plan that was compiled from numerous base plans locating intricate above and underground framework for the site, and to prepare an extensive landscape buffer design that would create a substantial visual barrier between the neighboring communities and adjacent roadways.

UDKS also coordinated efforts to review the design plans and make the ultimate design decisions that would benefit all parties involved. UDKS was successful at these efforts by creating multiple graphic tools which effectively communicated the relationships between the proposed upgrades. In addition, UDKS designed signage utilizing the Seacoast logog. The new signage serves as an entry feature to their facility in Palm Beach Gardens.

Since construction of the new water storage tank tower, Seacoast has received positive feedback from residents for the final blend of design and the tower itself has become a landmark for the City of Palm Beach Gardens.

Client: Seacoast Utility Authority
Site Area: 40 acres
